

Subject: Web Designing with WordPress

Semester: III

Academic Year: 2025-26

Class: SE

List of Experiments:

Sr. No	Title of Experiments	Module
1	Create a personal profile page using HTML5 tags including headings, lists, links, and tables.	Module 1
2	Apply internal and external CSS for styling. Include selectors, classes, ID, and text formatting.	Module 1
3	Embed images, audio, and video using HTML5 tags (, <audio>, <video>).	Module 1
4	Design a contact form using form elements like text fields, radio buttons, checkboxes, dropdowns, and submit/reset buttons.	Module 1
5	Create a multi-sectioned web page with navigation using <nav>, <section>, <footer> and CSS flexbox or grid.	Module 1
6	Sign up on WordPress.com and create a basic blog with 2–3 posts, media, and categories.	Module 2
7	Install WordPress using XAMPP server, configure basic settings, and explore the dashboard.	Module 2
8	Install a new theme, customize the appearance, and create a homepage and about page.	Module 2
9	Install essential plugins (like SEO, Contact Form), and configure sidebar and navigation menu.	Module 2
10	Add WooCommerce plugin, set up a product page, cart, and checkout using WordPress.	Module 2
